

Forward Prediction Calculator

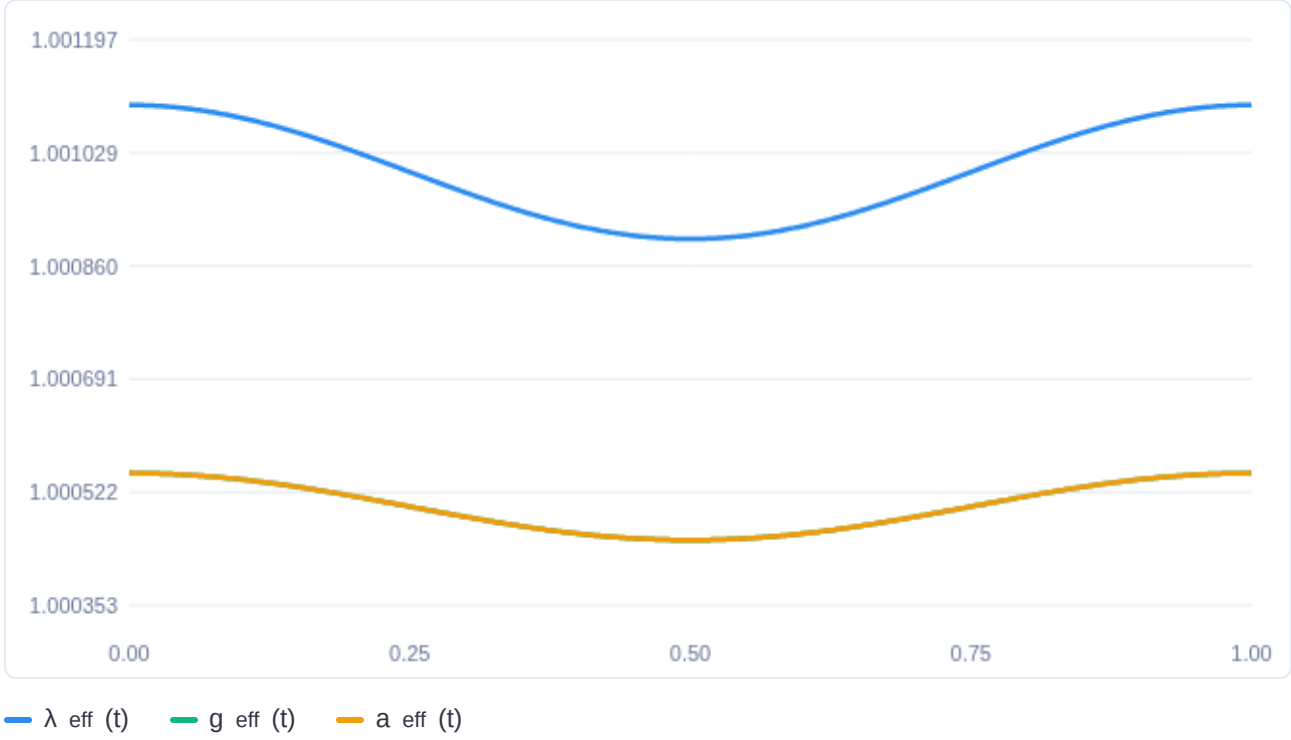

Compute $\lambda_{\text{eff}}(t)$, $g_{\text{eff}}(t)$, $a_{\text{eff}}(t)$ from the unified correction law

Unified Correction Law

$$X_{\text{eff}}(t) = X_0 \cdot (1 + c_X \cdot G(t))$$
$$G(t) = A_{\text{base}} + A_{\text{amp}} \cdot \cos(2\pi t)$$

A_BASE	A_AMP
0.001	0.0001
Λ_{SUB0} ; (DECAY BASELINE)	C_{Λ} (DECAY COUPLING)
1.0	1.0
G_{SUB0} ; (TIME GRADIENT BASELINE)	C_G (TIME GRADIENT COUPLING)
1.0	0.5
A_{SUB0} ; (INERTIA BASELINE)	C_A (INERTIA COUPLING)
1.0	0.5

Effective Quantities over $t \in [0, 1]$

Sample Points

T	G(T)	Λ_{EFF}	G_{EFF}	A_{EFF}	$\Delta\Lambda/\Lambda_{\text{SUB0}}$
0.00	1.1000e-3	1.00110000	1.00055000	1.00055000	1.1000e-3
0.10	1.0809e-3	1.00108090	1.00054045	1.00054045	1.0809e-3
0.20	1.0309e-3	1.00103090	1.00051545	1.00051545	1.0309e-3
0.30	9.6910e-4	1.00096910	1.00048455	1.00048455	9.6910e-4
0.40	9.1910e-4	1.00091910	1.00045955	1.00045955	9.1910e-4
0.50	9.0000e-4	1.00090000	1.00045000	1.00045000	9.0000e-4
