Compute $x_{\text{eff}}(t)$, $g_{\text{eff}}(t)$, $a_{\text{eff}}(t)$ from the unified correction law

Unified Correction Law

$$x_{\text{eff}}(t) = x_0 \cdot (1 + c_x \cdot G(t)) \quad G(t) = A_{\text{base}} + A_{\text{amp}} \cdot \cos(2t)$$

A_{base}

A_{amp}

x_0 ; (decay baseline)

c_x (decay coupling)

g_0 ; (time gradient baseline)

c_g (time gradient coupling)

a_0 ; (inertia baseline)

c_a (inertia coupling)

Effective Quantities over $t \in [0, 1]$

$$x_{\text{eff}}(t) \quad g_{\text{eff}}(t) \quad a_{\text{eff}}(t)$$

Sample Points

t	$G(t)$	x_{eff}	g_{eff}	a_{eff}	$\dots$
